Mid Term Exam

70

Academic year: *2025-2026*
Semester: *First*
Department: *Information Technology*
Level: *1st Level*

Subject: *Computer Programming 1*
Examiner: *Dr. Samera Barraood*
Day and Date: *Sunday 2/11/2025*
Time allowed: *One hour*

23

Question 1: Read each statement carefully. Write (T) for True or (F) for False statement (10 Marks):

1. Python can run only on Windows operating system. F
2. Python has not built-in constant types that cannot be changed once defined. F
3. The len() function returns the number of characters in a string, without including spaces. F
4. A compiler executes the entire program at once. F
5. The upper() function is used to find the data type of a variable. F
6. The count() function can be used to limit the number of decimal places in a float. T
7. You can use only double quotes to define strings in Python. F
8. Spaces are not allowed in variable names if they are enclosed in quotes. T
9. The print function can be used as a variable name without any issues. F
10. Python is a middle-level programming language. T

6

Question 2: Choose the correct answer for each question. (10 Marks):

1. **Which of these is NOT a rule for naming variables in Python:**
   a) Variable names can start with a number.
   b) Spaces are not allowed in variable names.
   c) Avoid using Python keywords
   d) Variable names can contain letters, numbers, and underscores.

7

2. **What will happen if you use a Python keyword as a variable name?**
   a) Permanently (دائما) It will work fine.
   b) It will override (تتجاهل) the keyword's function.
   c) It will cause a NameError.
   d) It will cause a SyntaxError.

3. **What is the result of int(0.2 + 0.3) in Python?**
   a) 0.5 b) 0.50000000000000004 c) 0 d) 1

4. **Which function can be used to round a number to two decimal place?**
   a) round(x, 2) b) round(x) c) round(x, 1) d) ccil(x)

5. **t is the data type of the result of 7/3?**
   int b) float c) str d) double

6. What is the result of (2 + 3 * 3) % 2?

a) 5 b) 5.5 c) 0 d) 1

7. What is the output of the following code?

```
first_name = "ada"
last_name = "lovelace"
full_name = f"{first_name} {last_name}"
print(full_name.title())
```

a) ada lovelace
b) ADA LOVELACE
c) Ada Lovelace
d) Ada lovelace

8. What is the purpose of an f-string?

a) To find a substring
b) To format strings by embedding expressions or variables inside curly braces {}
c) To convert a string to uppercase
d) To define a function

9. What is the output of the following code?

x, y, z = 0, 10, 100

a) Assigns 0 to x, then 10 to y, then 100 to z sequentially (بالتسلسل).
b) Assigns 0 to x, 10 to y, 100 to z all three variables simultaneously (مرة واحدة معاً).
c) Assigns 100 to x, 10 to y, 0 to z all three variables simultaneously (مرة واحدة معاً).
d) It is an invalid statement.

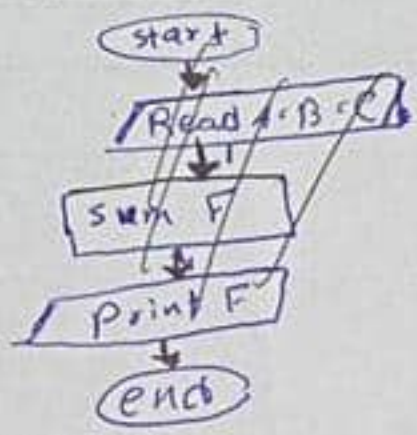

10. What will print("\tInformation \tTechnology") output?

a) Information Technology (with a single space in the beginning and between the words)
b) \tInformation \tTechnology
c) Information Technology (with a tab space in the beginning of each word)
d) It will cause an error.

Question 3: Answer the following questions about algorithms (10 Marks):

1. Write an algorithm to find the total of three numbers.

1- start
2- Read A, B, C
3- Sum F = A + B + C
4- print = F
5- end

2. Draw a flowchart to find the smallest number between two numbers.
